SUMMARY

Around 6+ years of experience as a highly creative, technically skilled and result-focused Software Developer providing technical solutions support to maintain and enhance business/technology infrastructure in a timely and cost-effective manner.

SKILL SET

Knowledge	Data Structures, Unix Shell Scripting, GPU Architecture, HPC (Application layer), MySQL and PostgreSQL Tuning, CUDA, Micro-controller, Linux Device Drivers, RTOS, HTML, CSS, JS, Java
Operating Systems	Linux/Unix and Windows
Programming Language	C, C++, Java (Basics)
DevOps Tools	Git, Docker, Perforce

WORK EXPERIENCE

- **Software Engineer** at AMDOCS April 8, 2024 - Present
- **Software Developer** at Harman Connected Services (Client AMDOCS) March 7, 2022 - April 5, 2024
- **System Engineer** at Tata Consultancy Services (Client AMD) August 19, 2019 - March 4, 2022

PROJECTS

1 Ensemble (CSM, Billing)

Description: Undertook the enhancement and development of a robust software solution within the telecommunications domain.

Technologies Utilized: C/C++, SQL, Shell Scripting, Linux/Unix

Key Responsibilities:

- Collaborated with team members to enhance and develop features within the Ensemble project.
- Implemented efficient algorithms using C.
- Managed database interactions utilizing SQL for data retrieval and manipulation.
- Automated tasks and streamlined processes through effective shell scripting.
- Functional testing experience with a strong focus on business knowledge enhancement

2 Enterprise Workload Optimization

Description: Engaged in the optimization of MySQL Server and PostgreSQL databases tailored to specific platforms within the Enterprise Workload Optimization project. Achieved a notable performance enhancement of up to 7% through meticulous configuration parameter adjustments.

Technologies Utilized: MySQL Server, PostgreSQL, perf and uProf tools, Shell Scripting, Linux/unix

Key Responsibilities:

- Conducted in-depth analysis and modification of configuration parameters to optimize MySQL Server and PostgreSQL databases.

- Utilized perf and upprof tools for precise performance profiling and identification of bottlenecks.
- Implemented Linux Shell Scripts to automate testing processes, ensuring efficiency and reliability of optimizations.

3 HPC Applications Porting and Development

Description: Contributed as a developer in the porting and optimization of High-Performance Computing (HPC) applications from CUDA to AMD ROCM, tailored for the AMD platform.

Technologies Utilized: C, C++, CUDA, ROCM, GDB, Makefile, Autotools, Shell Script, GIT, Dockers, Linux/unix

Key Responsibilities:

- Led the porting efforts from CUDA to AMD ROCM, ensuring seamless functionality on the AMD platform.
- Optimized HPC applications for improved performance and compatibility with AMD hardware.
- Utilized a range of development tools including GDB, Makefile, Autotools, and GIT for efficient development and version control.

EDUCATION

- P.G Diploma in Embedded System Design from CDAC Hyderabad (2019) with 77%
- Bachelor of Engineering (B.E) in E&TC from Pune University (2014-2018) with Distinction
- HSC, Pune (2014) with 64%
- SSC, Shirpur (2012) with 90%
