

Hi, I'm Tejas Chinchore — Software Engineer.

6+ years building performant, low-level and systems software — C/C++, HPC on GPUs (CUDA & AMD ROCm), database tuning, and Linux tooling. Currently at **Amdocs**, and shipping production-quality Kotlin/Compose Android apps on the side, built AI-native with **Cursor** and **Claude**.

01 — ABOUT

Turning systems problems into measurable performance wins.

I'm a Software Engineer with **6+ years** of experience delivering technical solutions across telecom platforms, database performance optimization, and high-performance computing. I enjoy going deep into a stack — from application code down to CPU/GPU behavior — and shipping changes that are both maintainable and fast. In my spare time I build and ship **Kotlin / Jetpack Compose Android apps**, developed AI-natively with **Cursor** and **Claude** — leaning on MCP servers, custom rules and agent skills to stay fast without sacrificing craft.

Where I've built & shipped.

Software Engineer

Apr 2024 — Present

Amdocs
Building and enhancing telecom-domain software with a focus on correctness, performance and maintainability across Linux-based systems.

Software Developer

Mar 2022 — Apr 2024

Harman Connected Services (Client: Amdocs)
Contributed to the Ensemble CSM/Billing platform: feature development in C/C++, SQL data flows, and shell-based automation.

System Engineer

Aug 2019 — Mar 2022

Tata Consultancy Services (Client: AMD)
Worked on database performance tuning and HPC application porting from CUDA to AMD ROCm — using perf / uProf, GDB, Make/Autotools and Docker.

Selected work.

TELECOM

Ensemble — CSM & Billing

Enhanced and developed features for a robust telecom software platform. Wrote efficient C algorithms, handled SQL-driven data flows, and automated tasks via shell scripting. Contributed to functional testing with strong business-domain understanding.

C / C++ SQL Shell Linux

DATABASES

Enterprise Workload Optimization

Tuned MySQL Server and PostgreSQL for platform-specific workloads. Analyzed configuration parameters and used perf and AMD uProf to pinpoint bottlenecks — delivering up to ~7% performance uplift. Automated the testing loop via shell scripts.

MySQL PostgreSQL perf uProf Shell

HPC & GPU

HPC Applications: CUDA → ROCm

Led the porting and optimization of HPC applications from NVIDIA CUDA to AMD ROCm for the AMD platform. Ensured seamless functionality and improved performance while managing builds with Make/Autotools and Docker, and debugging with GDB.

C / C++ CUDA ROCm GDB Docker Git

ANDROID · AI-BUILT

FinancialHub — Personal Finance

Native Android app (Kotlin + Jetpack Compose) that succeeds my earlier web version — home-loan tracker, expenses, bill reminders, SIP/RD investments, insurance vault and Google Drive document uploads. Ships an on-device SMS parser that reads incoming bank alerts and pre-fills expense entries. Firebase Auth/Firestore backend with a strict email allowlist. Designed and built end-to-end with Cursor + Claude.

Kotlin Compose Firebase
Google Drive API DataStore SMS Parser

ANDROID + AR · AI-BUILT

MyBaby — Baby-Care Companion

A Kotlin/Compose baby-care app for parents: IAP-standard vaccination schedule with smart reminders, WHO-standard growth tracker, **AR-based height measurement** (ARCore + CameraX + ML Kit pose detection), disease & medication tracking with check-in reminders, memory timeline, PDF export, an in-app APK updater and Firebase family sharing.

Kotlin Compose ARCore CameraX
ML Kit Firebase WorkManager

ANDROID · ON-DEVICE AI

ShortsForge — Shorts Maker

A Kotlin/Compose Android app for generating short-form video content on-device. Uses **Sherpa-onnx (Piper TTS)** for offline voice synthesis, WorkManager foreground services for long-running renders and Hilt for DI. Built AI-natively with Cursor + Claude.

Kotlin Compose Hilt WorkManager
Sherpa-onnx Piper TTS
